ZoneFlex™ 7782-N

30 DEGREE NARROW BEAM
SMART WI-FI OUTDOOR AP

The Industry’s Highest Capacity, Highest Performing Access Point for Extreme, High Density Wi-Fi Deployments

The ZoneFlex 7782-N is the first dual-band 802.11n outdoor access point (AP) designed explicitly for very high density user environments such as stadiums, arenas, train stations, convention centers, and major metro areas.

The ZoneFlex 7782-N is the only AP on the market to integrate patented BeamFlex™ technology and chip-based transmit beamforming (TxBF), combining these technologies with a 30º narrow beam adaptive antenna array to deliver up to 7 dB of signal-to-interference-plus-noise (SINR) improvement above the antenna gain and up to 15 dB of interference mitigation. This enables much longer range signals and more resilient mesh connections that adapt to interference and changing environmental conditions.

In addition, the ZoneFlex 7782-N uniquely leverages a predictive model for channel selection (ChannelFly) that uses actual activity to learn what channels will yield the most capacity to provide the highest client speeds and reduce interference.

Designed for easy installation within an ultra lightweight and low profile enclosure, the Ruckus ZoneFlex 7782-N is ideal for venue owners looking to quickly and economically deploy Wi-Fi in high-capacity environments such as stadiums, arenas, train stations, convention centers, and major metro areas. Using a very narrow and focused beam, the 7782-N APs can be deployed in close proximity, mitigating co-channel interference. This is critical as high density deployments require a large number of APs within a fixed space.

The ZoneFlex 7782-N can be centrally managed by the ZoneDirector Smart WLAN controller or the SmartCell™ Gateway 200 (SCG 200) as part of a unified indoor/outdoor wireless LAN, deployed as a standalone AP and managed individually, or through the FlexMaster remote Wi-Fi management system.
